

## Open Driver Selection Process for SIM Racing Seats for Le Mans Virtual Series 2022-2023

D'station Racing announces that it will conduct an online driver selection process as it prepares to make its return to the second season of the Le Mans Virtual Series, the world's most premier simulator racing series run under the supervision of the ACO, the organizer of the 24 Hours of Le Mans and the FIA World Endurance Championship Series. Applicants to the online selection process will compete for possible driver seats in the 2022-23 season, which is set to start September 17 in Bahrain.

The selection process will begin with the submission of your application through the Google Form link below. Finalists from the application phase will then be invited to put their SIM racing skills to the test with qualifying and race simulations on a privately hosted server for rFactor2, the official SIM racing platform of the series. Top ranking drivers will be selected by a panel of judges for the official driving roster of D'station Racing for its season entry application.

D'station Racing would like to open this SIM driver selection process for those who believe they have what it takes to compete amongst the world's top tier professional and eSports drivers in the Le Mans Virtual Series.

We look forward to receiving your application in this competitive selection process.
